## RECENT PROJECTS

### Real Estate

Universal builders,a website meant for companies working in the field of construction or real estate. The backbone of this website is MongoDB Atlas, Express.js (a framework of Node.js) and React.js -(MERN project). This website basically includes a landing page, Admin page and a Super Admin page. Other supporting tools are weather API ,Rechart.js library.

### Nila Resort Management

This project is developed using MEAN Stack Technology and basically includes a home component, a register and login component, a User Component, and an Admin component. Users can book their room on the user page after registering and login. On the admin page, the admin can view the guest details and can adjust the price of the rooms according to the seasonal demands.

### Purple

This project is a E-commerce website, developed using MEAN Stack Technology. It includes a home component, a Wishlist Component, and a cart component. Users can add their favorite products to wishlist and can use them for future shopping. Purchase of the product is available at the cart component.
